3M™ Peltor™ H520AH02, Food Industry Earmuff

PELTOR™

The Sound Solution

Hygienic
Evolution

3M

Hearing protectors specially designed for the food industry

We are taking the evolution of hearing protection to a new level with a specially designed variation of the 3M™ Peltor™ Optime™ II, based on the well-known 3M Peltor comfort and sound attenuation.

We have developed new materials specially tailored to suit the ever demanding requirement for hygiene and quality in the food industry. The replaceable foam lining in the shell is specially designed to prevent moisture and heat build-up and which is a common complaint when working in a physically demanding environment.

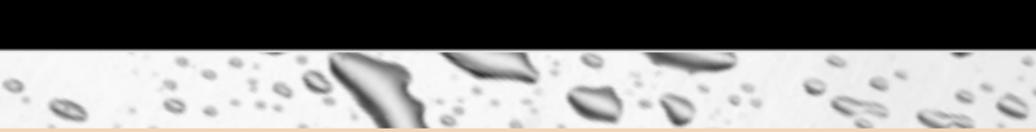

PELTOR™

Simply hygienic

The all-new head strap comprising of soft PVC is designed to reduce tiny crevices where bacteria can grow readily. The moulded foam in the hearing protector shell is another new feature designed for improved hygiene.

Lightweight

The headband is made of highly durable stainless steel material which helps ensure a constant pressure for reassured comfort and protection during wear-time. The unique two-point fastener with individually sprung bands provides an evenly distributed pressure.

Easy to keep clean

The noticeably reduced-size shells have an extremely low profile with no protruding parts and are machine washable up to 55°C. This is particularly appealing in food production environments with stringent hygiene requirements.

The best hearing protector is the one you use

Hygienic material

The new, patented cushions are made of moulded PVC foam. The material is specially designed to repel moisture and minimize condensation. Easy to clean and disinfect using isopropyl alcohol.

Interchangeable parts

These hearing protectors are perfect for the food industry, where good hygiene is crucial key requirement. The replacement hygiene kit includes new ear cushions and inserts. It is advisable to replace cushions and inserts twice a year for the maximum protection and comfort.

Traceable earplugs

Hearing protectors that are visible in metal detectors – ideal for use in the food industry. They're hygienic, easy to clean and have no loose parts.

3M™ E-A-R Soft™ Metal Detectable Earplug

Ideal for high noise level exposure in the region of 95dB(A) to 110dB(A). Made of slow-expanding polyurethane foam, these earplugs provide an excellent seal and optimal comfort. They also have an integrated steel ball and a detectable blue metal cord.

Product code: ES-01-011A

3M™ E-A-R™ Tracer™ Earplug

Ideal for high noise levels in the region of 94dB(A) to 105dB(A). These earplugs are also visible in metal detectors and have a highly visible blue vinyl cord, the only colour that is not permitted for use in food products.

Product code: TR-01-00 0 (with Pillowpack)
and TR-01-020 (with storage case)

3M™ E-A-R™ Tracer™ 20 Earplug

This earplug has been especially developed to meet the need of lower noise levels but still requiring to wear an hearing protection. Typically this product would be ideal for noise levels from 83dB(A) to 93dB(A). These earplugs are also visible in metal detectors and have a highly visible blue vinyl cord, the only colour that is not permitted for use in food products

Product code: TR-01-001
